

Recombinant Human PLS1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PLS1-2344H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PLS1 MS Standard C13 and N15-labeled recombinant protein (NP_002661) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Plastins are a family of actin-binding proteins that are conserved throughout eukaryote evolution and expressed in most tissues of higher eukaryotes. In humans, two ubiquitous plastin isoforms (L and T) have been identified. The protein encoded by this gene is a third distinct plastin isoform, which is specifically expressed at high levels in the small intestine. Alternatively spliced transcript variants varying in the 5' UTR, but encoding the same protein, have been found for this gene. A pseudogene of this gene is found on chromosome 11.
