

Recombinant Human UFD1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. UFD1-2345H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	UFD1L MS Standard C13 and N15-labeled recombinant protein (NP_001030324) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene forms a complex with two other proteins, nuclear protein localization-4 and valosin-containing protein, and this complex is necessary for the degradation of ubiquitinated proteins. In addition, this complex controls the disassembly of the mitotic spindle and the formation of a closed nuclear envelope after mitosis. Mutations in this gene have been associated with Catch 22 syndrome as well as cardiac and craniofacial defects. Alternative splicing results in multiple transcript variants encoding different isoforms. A related pseudogene has been identified on chromosome 18.
