

Recombinant Human SMARCA4, His-tagged

Cat. No. SMARCA4-8471H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SMARCA4 was expressed in Baculovirus-insect cell.
Species	Human
Source	Insect Cells
Description	The protein encoded by this gene is a member of the SWI/SNF family of proteins and is similar to the brahma protein of Drosophila. Members of this family have helicase and ATPase activities and are thought to regulate transcription of certain genes by altering the chromatin structure around those genes. The encoded protein is part of the large ATP-dependent chromatin remodeling complex SNF/SWI, which is required for transcriptional activation of genes normally repressed by chromatin. In addition, this protein can bind BRCA1, as well as regulate the expression of the tumorigenic protein CD44. Mutations in this gene cause rhabdoid tumor predisposition syndrome type 2. Multiple transcript variants encoding different isoforms have been found for this gene.
Form	The protein is in 20mM Tris-HCl pH7.9, 100mM NaCl, 0.2mM EDTA, 1mM DTT and 20% glycerol.
Molecular Mass	189.0 kDa
Purity	0.9
Unit Definition	1 unit equals 1 nanogram purified protein. 50 - 100 units are required for an in vitro
