

Recombinant Human PDCD6 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PDCD6-2556H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PDCD6 MS Standard C13 and N15-labeled recombinant protein (NP_037364) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a calcium-binding protein belonging to the penta-EF-hand protein family. Calcium binding is important for homodimerization and for conformational changes required for binding to other protein partners. This gene product participates in T cell receptor-, Fas-, and glucocorticoid-induced programmed cell death. In mice deficient for this gene product, however, apoptosis was not blocked suggesting this gene product is functionally redundant. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene, and a pseudogene of this gene is also located on the short arm of chromosome 5.
