

Recombinant Human GBA3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GBA3-2577H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GBA3 MS Standard C13 and N15-labeled recombinant protein (NP_066024) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is an enzyme that can hydrolyze several types of glycosides. This gene is a polymorphic pseudogene, with the most common allele being the functional allele that encodes the full-length protein. Some individuals, as represented by the reference genome allele, contain a single nucleotide polymorphism that results in a premature stop codon in the coding region, and therefore this allele is pseudogenic due to the failure to produce a functional full-length protein. Alternative splicing of this gene results in multiple transcript variants.
