

Recombinant Human MELTF Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MELTF-2632H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MFI2 MS Standard C13 and N15-labeled recombinant protein (NP_005920) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a cell-surface glycoprotein found on melanoma cells. The protein shares sequence similarity and iron-binding properties with members of the transferrin superfamily. The importance of the iron binding function has not yet been identified. This gene resides in the same region of chromosome 3 as members of the transferrin superfamily. Alternative splicing results in two transcript variants.
Molecular Mass	80.21 kDa
