

Recombinant Human ELP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ELP1-2644H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	IKBKAP MS Standard C13 and N15-labeled recombinant protein (NP_003631) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a scaffold protein and a regulator for three different kinases involved in proinflammatory signaling. The encoded protein can bind NF-kappa-B-inducing kinase and I-kappa-B kinases through separate domains and assemble them into an active kinase complex. Mutations in this gene have been associated with familial dysautonomia. Alternative splicing results in multiple transcript variants encoding different isoforms.
