

Recombinant Human RSPH6A Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. RSPH6A-2734H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	RSPH6A MS Standard C13 and N15-labeled recombinant protein (NP_110412) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is similar to a sea urchin radial spoke head protein. Radial spoke protein complexes form part of the axoneme of eukaryotic flagella and are located between the axoneme's outer ring of doublet microtubules and central pair of microtubules. In Chlamydomonas, radial spoke proteins are thought to regulate the activity of dynein and the symmetry of flagellar bending patterns. This gene maps to a region of chromosome 19 that is linked to primary ciliary dyskinesia-2 (CILD2).
