

Recombinant Human SGK1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. SGK1-2811H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	SGK1 MS Standard C13 and N15-labeled recombinant protein (NP_005618) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a serine/threonine protein kinase that plays an important role in cellular stress response. This kinase activates certain potassium, sodium, and chloride channels, suggesting an involvement in the regulation of processes such as cell survival, neuronal excitability, and renal sodium excretion. High levels of expression of this gene may contribute to conditions such as hypertension and diabetic nephropathy. Several alternatively spliced transcript variants encoding different isoforms have been noted for this gene.
