

Active Recombinant Human TNFRSF11B Protein, His tagged

Cat. No. TNFRSF11B-169H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human osteoprotegerin protein, fused to His-tag at C-terminus, was expressed in Hi-5 cell using baculovirus expression system and purified by using conventional chromatography techniques.
Species	Human
Source	Insect Cells
ProteinLength	22-401aa
Description	The protein encoded by this gene is a member of the TNF-receptor superfamily. This protein is an osteoblast-secreted decoy receptor that functions as a negative regulator of bone resorption. This protein specifically binds to its ligand, osteoprotegerin ligand, both of which are key extracellular regulators of osteoclast development. Studies of the mouse counterpart also suggest that this protein and its ligand play a role in lymph-node organogenesis and vascular calcification. Alternatively spliced transcript variants of this gene have been reported, but their full length nature has not been determined.
Form	Liquid
Bio-activity	Measured by its ability to inhibit cytotoxicity using Jurkat human acute T cell leukemia cells in the presence of 2 ng/mL of human TRAIL. The ED50 range $\leq$ 8 ng/mL.
Molecular Mass	44.7 kDa
