

Recombinant Human CBFA2T3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CBFA2T3-2858H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CBFA2T3 MS Standard C13 and N15-labeled recombinant protein (NP_005178) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the myeloid translocation gene family which interact with DNA-bound transcription factors and recruit a range of corepressors to facilitate transcriptional repression. The t(16;21)(q24;q22) translocation is one of the less common karyotypic abnormalities in acute myeloid leukemia. The translocation produces a chimeric gene made up of the 5'-region of the runt-related transcription factor 1 gene fused to the 3'-region of this gene. This gene is also a putative breast tumor suppressor. Alternative splicing results in transcript variants.
