

Recombinant Human FHL2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. FHL2-2938H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	FHL2 MS Standard C13 and N15-labeled recombinant protein (NP_963849) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the four-and-a-half-LIM-only protein family. Family members contain two highly conserved, tandemly arranged, zinc finger domains with four highly conserved cysteines binding a zinc atom in each zinc finger. This protein is thought to have a role in the assembly of extracellular membranes. Also, this gene is down-regulated during transformation of normal myoblasts to rhabdomyosarcoma cells and the encoded protein may function as a link between presenilin-2 and an intracellular signaling pathway. Multiple alternatively spliced variants encoding different isoforms have been identified.
