

Recombinant Human MEF2A Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MEF2A-2972H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MEF2A MS Standard C13 and N15-labeled recombinant protein (NP_005578) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a DNA-binding transcription factor that activates many muscle-specific, growth factor-induced, and stress-induced genes. The encoded protein can act as a homodimer or as a heterodimer and is involved in several cellular processes, including muscle development, neuronal differentiation, cell growth control, and apoptosis. Defects in this gene could be a cause of autosomal dominant coronary artery disease 1 with myocardial infarction (ADCAD1). Several transcript variants encoding different isoforms have been found for this gene.
