

Recombinant Human STX1B Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. STX1B-3065H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	STX1B MS Standard C13 and N15-labeled recombinant protein (NP_443106) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene belongs to a family of proteins thought to play a role in the exocytosis of synaptic vesicles. Vesicle exocytosis releases vesicular contents and is important to various cellular functions. For instance, the secretion of transmitters from neurons plays an important role in synaptic transmission. After exocytosis, the membrane and proteins from the vesicle are retrieved from the plasma membrane through the process of endocytosis. Mutations in this gene have been identified as one cause of fever-associated epilepsy syndromes. A possible link between this gene and Parkinson's disease has also been suggested.
