

Recombinant Human MAP3K20 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MAP3K20-3160H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ZAK MS Standard C13 and N15-labeled recombinant protein (NP_598407) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene is a member of the MAPKKK family of signal transduction molecules and encodes a protein with an N-terminal kinase catalytic domain, followed by a leucine zipper motif and a sterile-alpha motif (SAM). This magnesium-binding protein forms homodimers and is located in the cytoplasm. The protein mediates gamma radiation signaling leading to cell cycle arrest and activity of this protein plays a role in cell cycle checkpoint regulation in cells. The protein also has pro-apoptotic activity. Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
