

Recombinant Human KIN Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. KIN-3203H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	KIN MS Standard C13 and N15-labeled recombinant protein (NP_036443) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a nuclear protein that forms intranuclear foci during proliferation and is redistributed in the nucleoplasm during the cell cycle. Short-wave ultraviolet light provokes the relocalization of the protein, suggesting its participation in the cellular response to DNA damage. Originally selected based on protein-binding with RecA antibodies, the mouse protein presents a limited similarity with a functional domain of the bacterial RecA protein, a characteristic shared by this human ortholog. Alternative splicing of this gene results in multiple transcript variants.
