

Recombinant Human TMEM173 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TMEM173-3290H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TMEM173 MS Standard C13 and N15-labeled recombinant protein (NP_938023) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a five transmembrane protein that functions as a major regulator of the innate immune response to viral and bacterial infections. The encoded protein is a pattern recognition receptor that detects cytosolic nucleic acids and transmits signals that activate type I interferon responses. The encoded protein has also been shown to play a role in apoptotic signaling by associating with type II major histocompatibility complex. Mutations in this gene are the cause of infantile-onset STING-associated vasculopathy. Alternate splicing results in multiple transcript variants.
