

Recombinant Human ARMT1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ARMT1-3333H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	C6orf211 MS Standard C13 and N15-labeled recombinant protein (NP_078849) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Metal-dependent phosphatase that shows phosphatase activity against several substrates, including fructose-1-phosphate and fructose-6-phosphate. Its preference for fructose-1-phosphate, a strong glycating agent that causes DNA damage rather than a canonical yeast metabolite, suggests a damage-control function in hexose phosphate metabolism. Has also been shown to have O-methyltransferase activity that methylates glutamate residues of target proteins to form gamma-glutamyl methyl ester residues. Possibly methylates PCNA, suggesting it is involved in the DNA damage response.
Molecular Mass	51 kDa
