Recombinant Human GAA Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GAA-3385H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GAA MS Standard C13 and N15-labeled recombinant protein (NP_001073272) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes lysosomal alpha-glucosidase, which is essential for the degradation of glycogen to glucose in lysosomes. The encoded preproprotein is proteolytically processed to generate multiple intermediate forms and the mature form of the enzyme. Defects in this gene are the cause of glycogen storage disease II, also known as Pompe's disease, which is an autosomal recessive disorder with a broad clinical spectrum. Alternative splicing results in multiple transcript variants.
