

Recombinant Human HMGB2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. HMGB2-3390H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	HMGB2 MS Standard C13 and N15-labeled recombinant protein (NP_002120) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the non-histone chromosomal high mobility group protein family. The proteins of this family are chromatin-associated and ubiquitously distributed in the nucleus of higher eukaryotic cells. In vitro studies have demonstrated that this protein is able to efficiently bend DNA and form DNA circles. These studies suggest a role in facilitating cooperative interactions between cis-acting proteins by promoting DNA flexibility. This protein was also reported to be involved in the final ligation step in DNA end-joining processes of DNA double-strand breaks repair and V(D)J recombination.
