

Recombinant Human CD207 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CD207-3416H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CD207 MS Standard C13 and N15-labeled recombinant protein (NP_056532) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is expressed only in Langerhans cells which are immature dendritic cells of the epidermis and mucosa. It is localized in the Birbeck granules, organelles present in the cytoplasm of Langerhans cells and consisting of superimposed and zippered membranes. It is a C-type lectin with mannose binding specificity, and it has been proposed that mannose binding by this protein leads to internalization of antigen into Birbeck granules and providing access to a nonclassical antigen-processing pathway. Mutations in this gene result in Birbeck granules deficiency or loss of sugar binding activity.
