

Recombinant Human ARNT Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ARNT-3507H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ARNT MS Standard C13 and N15-labeled recombinant protein (NP_848513) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein containing a basic helix-loop-helix domain and two characteristic PAS domains along with a PAC domain. The encoded protein binds to ligand-bound aryl hydrocarbon receptor and aids in the movement of this complex to the nucleus, where it promotes the expression of genes involved in xenobiotic metabolism. This protein is also a co-factor for transcriptional regulation by hypoxia-inducible factor 1. Chromosomal translocation of this locus with the ETV6 (ets variant 6) gene on chromosome 12 have been described in leukemias. Alternative splicing results in multiple transcript variants.
