

Recombinant Human GET3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GET3-3520H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ASNA1 MS Standard C13 and N15-labeled recombinant protein (NP_004308) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene represents the human homolog of the bacterial <i>arsA</i> gene, encoding the arsenite-stimulated ATPase component of the arsenite transporter responsible for resistance to arsenicals. This protein is also a central component of a transmembrane domain (TMD) recognition complex (TRC) that is involved in the post-translational delivery of tail-anchored (TA) proteins from the cytosol to the endoplasmic reticulum (ER). It recognizes and selectively binds the TMD of TA proteins in the cytosol, and delivers them to the ER for insertion.
