

Recombinant Human ORC6 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ORC6-3522H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ORC6L MS Standard C13 and N15-labeled recombinant protein (NP_055136) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The origin recognition complex (ORC) is a highly conserved six subunit protein complex essential for the initiation of the DNA replication in eukaryotic cells. Studies in yeast demonstrated that ORC binds specifically to origins of replication and serves as a platform for the assembly of additional initiation factors such as Cdc6 and Mcm proteins. The protein encoded by this gene is a subunit of the ORC complex. Gene silencing studies with small interfering RNA demonstrated that this protein plays an essential role in coordinating chromosome replication and segregation with cytokinesis.
