

Recombinant Human DPP6 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DPP6-3592H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DPP6 MS Standard C13 and N15-labeled recombinant protein (NP_001927) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a single-pass type II membrane protein that is a member of the peptidase S9B family of serine proteases. This protein has no detectable protease activity, most likely due to the absence of the conserved serine residue normally present in the catalytic domain of serine proteases. However, it does bind specific voltage-gated potassium channels and alters their expression and biophysical properties. Variations in this gene may be associated with susceptibility to amyotrophic lateral sclerosis and with idiopathic ventricular fibrillation. Alternative splicing results in multiple transcript variants.
