

Recombinant Human GSS Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GSS-3695H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GSS MS Standard C13 and N15-labeled recombinant protein (NP_000169) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Glutathione is important for a variety of biological functions, including protection of cells from oxidative damage by free radicals, detoxification of xenobiotics, and membrane transport. The protein encoded by this gene functions as a homodimer to catalyze the second step of glutathione biosynthesis, which is the ATP-dependent conversion of gamma-L-glutamyl-L-cysteine to glutathione. Defects in this gene are a cause of glutathione synthetase deficiency.
