

Recombinant Human TCP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. TCP1-3714H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	TCP1 MS Standard C13 and N15-labeled recombinant protein (NP_110379) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a molecular chaperone that is a member of the chaperonin containing TCP1 complex (CCT), also known as the TCP1 ring complex (TRiC). This complex consists of two identical stacked rings, each containing eight different proteins. Unfolded polypeptides enter the central cavity of the complex and are folded in an ATP-dependent manner. The complex folds various proteins, including actin and tubulin. Alternate transcriptional splice variants of this gene, encoding different isoforms, have been characterized. In addition, three pseudogenes that appear to be derived from this gene have been found.
