

Recombinant Human USP8 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. USP8-3738H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	USP8 MS Standard C13 and N15-labeled recombinant protein (NP_005145) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein that belongs to the ubiquitin-specific processing protease family of proteins. The encoded protein is thought to regulate the morphology of the endosome by ubiquitination of proteins on this organelle and is involved in cargo sorting and membrane trafficking at the early endosome stage. This protein is required for the cell to enter the S phase of the cell cycle and also functions as a positive regulator in the Hedgehog signaling pathway in development. Pseudogenes of this gene are present on chromosomes 2 and 6. Alternate splicing results in multiple transcript variants.
