

Recombinant Human ARHGEF9 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ARHGEF9-3761H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ARHGEF9 MS Standard C13 and N15-labeled recombinant protein (NP_056000) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a Rho-like GTPase that switches between the active (GTP-bound) state and inactive (GDP-bound) state to regulate CDC42 and other genes. This brain-specific protein also acts as an adaptor protein for the recruitment of gephyrin and together these proteins facilitate receptor recruitment in GABAergic and glycinergic synapses. Defects in this gene are the cause of startle disease with epilepsy (STHEE), also known as hyperekplexia with epilepsy, as well as several other types of cognitive disability. Multiple transcript variants encoding different isoforms have been found for this gene.
