

Recombinant Human DOK7 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DOK7-3767H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DOK7 MS Standard C13 and N15-labeled recombinant protein (NP_775931) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is essential for neuromuscular synaptogenesis. The protein functions in aneural activation of muscle-specific receptor kinase, which is required for postsynaptic differentiation, and in the subsequent clustering of the acetylcholine receptor in myotubes. This protein can also induce autophosphorylation of muscle-specific receptor kinase. Mutations in this gene are a cause of familial limb-girdle myasthenia autosomal recessive, which is also known as congenital myasthenic syndrome type 1B. Alternative splicing results in multiple transcript variants.
