

Recombinant Human QDPR Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. QDPR-3987H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	QDPR MS Standard C13 and N15-labeled recombinant protein (NP_000311) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes the enzyme dihydropteridine reductase, which catalyzes the NADH-mediated reduction of quinonoid dihydrobiopterin. This enzyme is an essential component of the pterin-dependent aromatic amino acid hydroxylating systems. Mutations in this gene resulting in QDPR deficiency include aberrant splicing, amino acid substitutions, insertions, or premature terminations. Dihydropteridine reductase deficiency presents as atypical phenylketonuria due to insufficient production of biopterin, a cofactor for phenylalanine hydroxylase.
