

Recombinant Human HDAC7 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. HDAC7-4016H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	HDAC7A MS Standard C13 and N15-labeled recombinant protein (NP_057680) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Histones play a critical role in transcriptional regulation, cell cycle progression, and developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription factor access to DNA. The protein encoded by this gene has sequence homology to members of the histone deacetylase family. This gene is orthologous to mouse HDAC7 gene whose protein promotes repression mediated via the transcriptional corepressor SMRT. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
