

Recombinant Human CNOT7 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CNOT7-4189H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CNOT7 MS Standard C13 and N15-labeled recombinant protein (NP_037486) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene binds to an anti-proliferative protein, B-cell translocation protein 1, which negatively regulates cell proliferation. Binding of the two proteins, which is driven by phosphorylation of the anti-proliferative protein, causes signaling events in cell division that lead to changes in cell proliferation associated with cell-cell contact. The encoded protein downregulates the innate immune response and therefore provides a therapeutic target for enhancing its antimicrobial activity against foreign agents. Alternative splicing of this gene results in multiple transcript variants. Related pseudogenes have been identified on chromosomes 1 and X.
