

Recombinant Human RAPSN Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. RAPSN-4313H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	RAPSN MS Standard C13 and N15-labeled recombinant protein (NP_005046) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of a family of proteins that are receptor associated proteins of the synapse. The encoded protein contains a conserved cAMP-dependent protein kinase phosphorylation site, and plays a critical role in clustering and anchoring nicotinic acetylcholine receptors at synaptic sites by linking the receptors to the underlying postsynaptic cytoskeleton, possibly by direct association with actin or spectrin. Mutations in this gene may play a role in postsynaptic congenital myasthenic syndromes. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
