

Recombinant Human FMR1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. FMR1-4354H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	FMR1 MS Standard C13 and N15-labeled recombinant protein (NP_002015) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene binds RNA and is associated with polysomes. The encoded protein may be involved in mRNA trafficking from the nucleus to the cytoplasm. A trinucleotide repeat (CGG) in the 5' UTR is normally found at 6-53 copies, but an expansion to 55-230 repeats is the cause of fragile X syndrome. Expansion of the trinucleotide repeat may also cause one form of premature ovarian failure (POF1). Multiple alternatively spliced transcript variants that encode different protein isoforms and which are located in different cellular locations have been described for this gene.
Molecular Mass	71 kDa
