

Recombinant Human NUDT15 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. NUDT15-4386H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NUDT15 MS Standard C13 and N15-labeled recombinant protein (NP_060753) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes an enzyme that belongs to the Nudix hydrolase superfamily. Members of this superfamily catalyze the hydrolysis of nucleoside diphosphates, including substrates like 8-oxo-dGTP, which are a result of oxidative damage, and can induce base mispairing during DNA replication, causing transversions. The encoded enzyme is a negative regulator of thiopurine activation and toxicity. Mutations in this gene result in poor metabolism of thiopurines, and are associated with thiopurine-induced early leukopenia. Multiple pseudogenes of this gene have been identified.
