

Recombinant Human CLSTN1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CLSTN1-4490H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CLSTN1 MS Standard C13 and N15-labeled recombinant protein (NP_001009566) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene is a member of the calsynenin family, a subset of the cadherin superfamily. The encoded transmembrane protein, also known as alcadin-alpha, is thought to bind to kinesin-1 motors to mediate the axonal anterograde transport of certain types of vesicle. Amyloid precursor protein (APP) is trafficked via these vesicles and so this protein is being investigated to see how it might contribute to the mechanisms underlying Alzheimer's disease. Alternative splicing results in multiple transcript variants.
