

Recombinant Human CYP11A1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CYP11A1-4529H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CYP11A1 MS Standard C13 and N15-labeled recombinant protein (NP_001093243) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the mitochondrial inner membrane and catalyzes the conversion of cholesterol to pregnenolone, the first and rate-limiting step in the synthesis of the steroid hormones. Two transcript variants encoding different isoforms have been found for this gene. The cellular location of the smaller isoform is unclear since it lacks the mitochondrial-targeting transit peptide.
