

Recombinant Human LRRC8A Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. LRRC8A-4533H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	LRRC8A MS Standard C13 and N15-labeled recombinant protein (NP_062540) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein belonging to the leucine-rich repeat family of proteins, which are involved in diverse biological processes, including cell adhesion, cellular trafficking, and hormone-receptor interactions. This family member is a putative four-pass transmembrane protein that plays a role in B cell development. Defects in this gene cause autosomal dominant non-Bruton type agammaglobulinemia, an immunodeficiency disease resulting from defects in B cell maturation. Multiple alternatively spliced transcript variants, which encode the same protein, have been identified for this gene.
