

Recombinant Human GIP Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GIP-4581H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GIP MS Standard C13 and N15-labeled recombinant protein (NP_004114) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes an incretin hormone and belongs to the glucagon superfamily. The encoded protein is important in maintaining glucose homeostasis as it is a potent stimulator of insulin secretion from pancreatic beta-cells following food ingestion and nutrient absorption. This gene stimulates insulin secretion via its G protein-coupled receptor activation of adenylyl cyclase and other signal transduction pathways. It is a relatively poor inhibitor of gastric acid secretion.
