

Recombinant Human MANF Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MANF-4636H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MANF MS Standard C13 and N15-labeled recombinant protein (NP_006001) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is localized in the endoplasmic reticulum (ER) and golgi, and is also secreted. Reducing expression of this gene increases susceptibility to ER stress-induced death and results in cell proliferation. Activity of this protein is important in promoting the survival of dopaminergic neurons. The presence of polymorphisms in the N-terminal arginine-rich region, including a specific mutation that changes an ATG start codon to AGG, have been reported in a variety of solid tumors; however, these polymorphisms were later shown to exist in normal tissues and are thus no longer thought to be tumor-related.
