

Recombinant Human CAPZB Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. CAPZB-4706H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CAPZB MS Standard C13 and N15-labeled recombinant protein (NP_004921) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes the beta subunit of the barbed-end actin binding protein, which belongs to the F-actin capping protein family. The capping protein is a heterodimeric actin capping protein that blocks actin filament assembly and disassembly at the fast growing (barbed) filament ends and functions in regulating actin filament dynamics as well as in stabilizing actin filament lengths in muscle and nonmuscle cells. A pseudogene of this gene is located on the long arm of chromosome 2. Multiple alternatively spliced transcript variants encoding different isoforms have been found.
