

Recombinant Human GPBP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GPBP1-4804H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GPBP1 MS Standard C13 and N15-labeled recombinant protein (NP_075064) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene was originally isolated by subtractive hybridization of cDNAs expressed in atherosclerotic plaques with a thrombus, and was found to be expressed only in vascular smooth muscle cells. However, a shorter splice variant was found to be more ubiquitously expressed. This protein is suggested to play a role in the development of atherosclerosis. Studies in mice suggest that it may also function as a GC-rich promoter-specific trans-activating transcription factor. Several alternatively spliced transcript variants encoding different isoforms have been described for this gene.
