

Recombinant Human PTK2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PTK2-4856H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PTK2 MS Standard C13 and N15-labeled recombinant protein (NP_722560) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a cytoplasmic protein tyrosine kinase which is found concentrated in the focal adhesions that form between cells growing in the presence of extracellular matrix constituents. The encoded protein is a member of the FAK subfamily of protein tyrosine kinases but lacks significant sequence similarity to kinases from other subfamilies. Activation of this gene may be an important early step in cell growth and intracellular signal transduction pathways triggered in response to certain neural peptides or to cell interactions with the extracellular matrix. Several transcript variants encoding different isoforms have been found for this gene.
