

Recombinant Human MASP1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MASP1-4869H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MASP1 MS Standard C13 and N15-labeled recombinant protein (NP_001870) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a serine protease that functions as a component of the lectin pathway of complement activation. The complement pathway plays an essential role in the innate and adaptive immune response. The encoded protein is synthesized as a zymogen and is activated when it complexes with the pathogen recognition molecules of lectin pathway, the mannose-binding lectin and the ficolins. This protein is not directly involved in complement activation but may play a role as an amplifier of complement activation by cleaving complement C2 or by activating another complement serine protease, MASP-2. The encoded protein is also able to cleave fibrinogen and factor XIII and may may be involved in coagulation. A splice variant of this gene which lacks the serine protease domain functions as an inhibitor of the complement pathway. Alternate splicing results in multiple transcript variants.
Molecular Mass	79.25 kDa
AA Sequence	MRWLLLYYALCFSLSKASAHTVELNNMFGQIQSPGYPSDSEVTWNITVPDGF RIKLYFMHFNLESSYLCEYDYVKVETEDQVLATFCGRETTDTEQTPGQEVVLSPGSF

Purity > 80% as determined by SDS-PAGE and Coomassie blue staining

Stability Stable for 3 months from receipt of products under proper storage and handling conditions.

Storage Store at -80 centigrade. Avoid repeated freeze-thaw cycles.

Concentration 50 µg/mL as determined by BCA

Storage Buffer 100 mM glycine, 25 mM Tris-HCl, pH 7.3.

GENE INFORMATION

Gene Name MASP1 mannan binding lectin serine peptidase 1 [Homo sapiens (human)]

Official Symbol MASP1

Synonyms MASP1; mannan binding lectin serine peptidase 1; 3MC1; MAP1; MASP; RaRF; CRARF; MASP3; MAP44; PRSS5; CRARF1; mannan-binding lectin serine protease
