

Recombinant Human PRSS16 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PRSS16-4948H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PRSS16 MS Standard C13 and N15-labeled recombinant protein (NP_005856) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a serine protease expressed exclusively in the thymus. It is thought to play a role in the alternative antigen presenting pathway used by cortical thymic epithelial cells during the positive selection of T cells. The gene is found in the large histone gene cluster on chromosome 6, near the major histocompatibility complex (MHC) class I region. A second transcript variant has been described, but its full length nature has not been determined.
