

Recombinant Human IRF6 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. IRF6-5001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	IRF6 MS Standard C13 and N15-labeled recombinant protein (NP_006138) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the interferon regulatory transcription factor (IRF) family. Family members share a highly-conserved N-terminal helix-turn-helix DNA-binding domain and a less conserved C-terminal protein-binding domain. The encoded protein may be a transcriptional activator. Mutations in this gene can cause van der Woude syndrome and popliteal pterygium syndrome. Mutations in this gene are also associated with non-syndromic orofacial cleft type 6. Alternate splicing results in multiple transcript variants.
