

Recombinant Human MSL3 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. MSL3-5290H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MSL3 MS Standard C13 and N15-labeled recombinant protein (NP_523353) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a nuclear protein that is similar to the product of the Drosophila male-specific lethal-3 gene. The Drosophila protein plays a critical role in a dosage-compensation pathway, which equalizes X-linked gene expression in males and females. Thus, the human protein is thought to play a similar function in chromatin remodeling and transcriptional regulation, and it has been found as part of a complex that is responsible for histone H4 lysine-16 acetylation. This gene can undergo X inactivation. Alternative splicing results in multiple transcript variants. Related pseudogenes have been identified on chromosomes 2, 7 and 8.
