

Recombinant Human EPHX1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. EPHX1-5311H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	EPHX1 MS Standard C13 and N15-labeled recombinant protein (NP_000111) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Epoxide hydrolase is a critical biotransformation enzyme that converts epoxides from the degradation of aromatic compounds to trans-dihydrodiols which can be conjugated and excreted from the body. Epoxide hydrolase functions in both the activation and detoxification of epoxides. Mutations in this gene cause preeclampsia, epoxide hydrolase deficiency or increased epoxide hydrolase activity. Alternatively spliced transcript variants encoding the same protein have been found for this gene.
