

Recombinant Human PLEKHM2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. PLEKHM2-5386H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	PLEKHM2 MS Standard C13 and N15-labeled recombinant protein (NP_055979) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein that binds the plus-end directed microtubule motor protein kinesin, together with the lysosomal GTPase Arl8, and is required for lysosomes to distribute away from the microtubule-organizing center. The encoded protein belongs to the multisubunit BLOC-one-related complex that regulates lysosome positioning. It binds a Salmonella effector protein called Salmonella induced filament A and is a critical host determinant in Salmonella pathogenesis. It has a domain architecture consisting of an N-terminal RPIP8, UNC-14, and NESCA (RUN) domain that binds kinesin-1 as well as the lysosomal GTPase Arl8, and a C-terminal pleckstrin homology domain that binds the Salmonella induced filament A effector protein. Naturally occurring mutations in this gene lead to abnormal localization of lysosomes, impaired autophagy flux and are associated with recessive dilated cardiomyopathy and left ventricular noncompaction.
Molecular Mass	112.6 kDa
AA Sequence	MEPGEVKDRILENISLSVKKLQSYFAACEDEIPAIRNHDKVLQRLCEHLDHALLYGLQ

Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Stability	Stable for 3 months from receipt of products under proper storage and handling conditions.
Storage	Store at -80 centigrade. Avoid repeated freeze-thaw cycles.
Concentration	50 µg/mL as determined by BCA
Storage Buffer	100 mM glycine, 25 mM Tris-HCl, pH 7.3.

GENE INFORMATION

Gene Name	PLEKHM2 pleckstrin homology and RUN domain containing M2 [Homo sapiens (human)]
Official Symbol	PLEKHM2
Synonyms	PLEKHM2; pleckstrin homology domain containing, family M (with RUN domain) member 2; pleckstrin homology domain-containing family M member 2; KIAA0842; sifA and kinesin-interacting protein; PH domain-containing family M member 2; novel RUN and PH domain-containing protein; salmonella-induced filaments A and kinesin-interacting protein; SifA (Salmonella-induced filaments A) and kinesin-interacting protein; SKIP; RP11-169K16.1;
Gene ID	23207
mRNA Refseq	NM_015164
Protein Refseq	NP_055979
MIM	609613
UniProt ID	Q8IWE5
